

Quality Policy

over a century of leadership in salt

Cheetham Salt products have been sold in Australia and internationally for more than 100 years. Company history begins in 1888 and since then Cheetham Salt has become Australia's largest manufacturer of natural solar salt products for food and industrial markets.

Cheetham uses natural seawater, lake brines and other saline waters as the primary input to salt production. Solar evaporation contains the sustainable energy of the sun and the wind to produce high quality salt.

Natural solar salt however does not have quality inbuilt, quality is a combination of the processes and systems developed by Cheetham Salt and the contribution of each and every employee.

This Quality Policy is a statement of ongoing commitment by Cheetham Salt to maintain quality and registration to the ISO 9001 standard for quality management systems as a key business focus. The principles of continuous improvement are part of Cheetham Salt's business approach with objectives established and communicated throughout the organisation and reviewed by senior management.

Cheetham Salt's quality focus begins in the evaporation ponds and continues throughout all processes including distribution. It is company policy to produce and distribute products suitable for their intended purpose, in compliance with all relevant specifications and customer expectations.

Cheetham Salt is committed to supply quality products, delivered on time.
