

Crown HG Watersoftener Salt

Product Description

Crown HG Watersoftener Salt is naturally evaporated sea salt (sodium chloride) complying with the Australian New Zealand Food Standards Code 2.10.2. This product is a translucent to white solid, with extra coarse crystals and a mean particle size of approx. 7 mm. It is produced in Australia by natural solar evaporation of seawater, harvested, washed, sized and packed in accordance with good manufacturing practice, under a quality system that complies with ISO 9001.

Storage Conditions

Product is shelf life stable. Long-term storage does not adversely affect salt except for caking or lumping as salt absorbs/expels moisture from/to the atmosphere. Fine grain salts are particularly susceptible to caking. As a guide this product should be used within 12 months from manufacture date to avoid significant caking problems, however customers should assess their own individual needs for ordering frequency, stock rotation, stock levels and local conditions. To avoid significant caking, adjust ordering volume and frequency.
